Turn your SharePoint into a project management tool with Camako FastTrack. It suits just as fine for the simple needs as for the advanced users. It is the system to grow with.

Turn your SharePoint into a powerful project management tool to improve your project business.

- Standardizes and integrates project information
- Improves communication and reporting
- Speeds up information sharing and compilation
- Provides real-time and accurate information
- Enhances planning and predictability
- Improves forecasting and enables better decision making
- Saves time and reduces costs

This is the right tool, when Excel is not enough!

Practical functionalities to improve your project management

Resource management

Allocate resources based on planned requirements for individuals, roles and project activity.

Time reporting

Record time and expenses by individuals, per project and project tasks to gain accurate, real-time information on the project status.

Project workspace and collaboration tool

Manage documentation with version tracking, search and authority administration. In addition to the shared documentation libraries, persons have their own site with the allocated responsibilities and relevant project information.

Tools to power your project business

MINI CASE STUDIES

Efficient Time Reporting Increases Revenue

The consulting company omits to invoice some actual hours worked due to outdated reporting tool, which can be only accessed at the premises.

The Camako Solution

Camakon FastTrack is a web-based tool easily accessed at any time and at any place with an internet connection, even with a 3G mobile phone.

All hours are recorded in a standardized and comparable form directly to the data base for immediate reporting needs. The customer increased its revenue by 10% with the efficient, yet simple Camako FastTrack tool.

Camako FastTrack is built on the best technology

- User interface is created according to the PMI's and PMBok's recommended best practices.
- Modular structure of Camako FastTrack allows customization offered by SharePoint technology. It easily and effectively allows implementation of the specific functionalities your organization will need.
- Seamless integration to Microsoft Office Professional 2007, Project Server and Project Portfolio Server 2007.

Powered by SharePoint

SharePoint platform is a flexible tool to create sites and site structures based on your company's processes, content management, and other web applications, such as intranet and extranet – all easily customized to your company's look & feel.

- Microsoft Windows SharePoint Services 3.0 (WSS 3.0)
- Microsoft Office SharePoint Server 2007 (MOSS)
- SQL Server 2005
